

Appl. No. 09/763,507
Amdt. Dated August 28, 2003
Reply to Office action of June 6, 2003

ABSTRACT

A rear dérailleur device is provided, in particular for a bicycle equipped with a front dérailleur and a chain connecting a set of pinions with a set of disks. The rear dérailleur device includes a rotatable base provided with a return spring forcing the base in the anti-clockwise direction, guiding/dérailleur means fixedly connected with the base, and a movable tension plate fixedly connected with the guiding/dérailleur means.
